

## Wastewater Utility Green Power Report

December 2010

Electricity Generated in December: **66,752 kWh (kilowatt hours)**

This amount of electricity would have cost \$4,672 if it had been purchased from Duke Energy.

**32,000 gallons of grease** were processed in our digesters for the month.

**10 tons of food scraps** were processed this month.

**15% of our plant's power is generated on-site.**

The City of West Lafayette's Wastewater Utility has pledged to generate at least 10% of its electricity on-site in 2011 as Indiana's first wastewater plant to become an EPA Green Power Partner.
